

# wizard\_Name step description

In the wizard\_Name step you can choose to create new system or select existing system, in which your model will be created.

- Here system is called the element, which is defined in action, tag property: *type*.
- This step should be added before wizard\_Capture, and wizard\_Relate steps.
- If this step is not added to the wizard, by default the Data - model root is used as default owner.
- If the Create new radio button is selected, text box to add new element name and tree to select it owner is shown.
- If the Select existing button is selected, drop down list is shown with existing elements.

See the «wizard\_Name» stereotype properties descriptions in the following table.
