

# Creating Lr Programme Portfolio Relationships diagram

It is recommended to create the [D2 diagram](#) before creating the Programme Portfolio Relationships diagram.

To create an Lr Programme Portfolio Relationships diagram

---

1. Create Actual Projects.
2. Associate Actual Projects by dragging one project (part) to another (whole). Alternatively you can specify the whole and part properties.
3. Associate Actual Projects with Actual Organizations ([D2](#)) or Actual Posts ([D2](#)) responsible for them by using the Organizational Project Relationship.

You can:

- Nest Actual Projects, Actual Organizations, and Actual Posts to one another in the diagram to make it look more attractive and easier to read.
- Use the [Lr Responsibility Matrix](#) to define the association between Actual Projects and Actual Organization resources.
