NATO Programme Viewpoint

Programme views are introduced in the NAF Version 3 to describe the relationships between NATO capability requirements and the various programmes and projects being implemented. They provide programmatic details
and highlight the dependencies between capability management and the NATO acquisition process.
This information can be further leveraged to show the impact of acquisition decisions on the architecture.

The views of this viewpoint are described in the following sections:

- NPV-1 Programme Portfolio Relationships
- NPV-2 Programme to Capability Mapping
