Creating SV-2 diagram

It is recommended to complete a SV-1 before creating SV-2.

To create a SV-2 diagram

1. Create or reuse Resources created in SV-1.
2. Associate Resources using Resource interfaces.
3. Create Resource Ports.
4. Specify the types for the Resource Ports.

SV-2 product allows to show the provided and required services by particular Resources. You can model the structure of each Resource by using the Resource Internal Communications Description diagram or in a special structure compartment of this element shape.
