

Running the Hello World activity

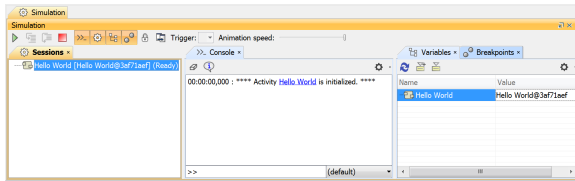

Once the Alf code for an Activity has been compiled, the Activity can be executed using Magic Model Analyst, just as for an Activity that had been entered using a graphical Activity diagram.

To run *Hello World*

- [Running a model with Alf](#)

1. Right click on *Hello World* in the Model Browser and select **Simulation > Run**. The Simulation window will appear, with *Hello World* listed as "Ready" under the Sessions pane.

2. Move the **Animation Speed** slider all the way to the right. (Even if it already appears to be at its rightmost position, make sure that it really is.)
3. Click on the **Start** button at the top left of the Simulation window. The output *Hello World!* should appear in the Console pane.
