Activating commercial license

Every commercial license requires activation. This makes the license locked to the Host ID (MAC / Ethernet address) of the network card within the particular machine.

- 6. Click Save. See a new record added in the activation records table.
- 7. In the Get key column of this table, click Send or Download to get the license key.

As a result, you get the file of activated commercial license key, for example, *Activated_key_For_<first name>_<last name>.lic.* Now you can apply the license key on Cameo Collaborator.
