Using Collaborator

The Collaborator for Teamwork Cloud application is a web-based product designed to present models in a simplified form for stakeholders, sponsors, customers, and engineering teams. The product makes it easy for users to review models and diagrams in a collaborative environment and keep the entire project team up to date on any changes made in the model. Cameo Collaborator allows to create both textual and graphical comments which significantly improves team collaboration by involving even non-technical team members in the model review process.
