

# Creating equivalent properties

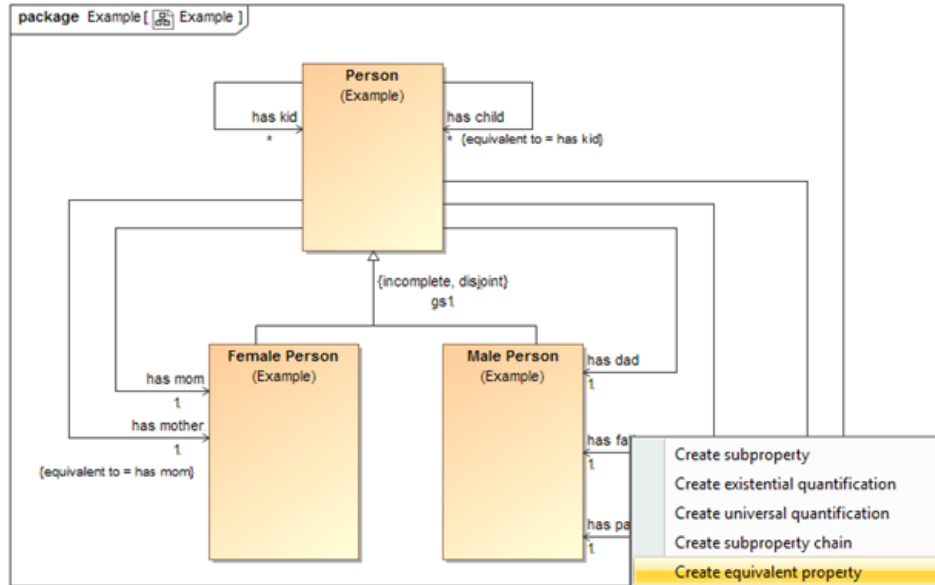

Properties can be equivalent to each other. You can make two or more properties equivalent by dragging a property to the target property. The Concept Modeler provides you with the following shortcut menus:

- Create equivalent property.
- Add property to equivalent property.

A property is semantically equivalent to another property if it is stereotyped with «Equivalent Property», and its tagged value is **equivalent to**.

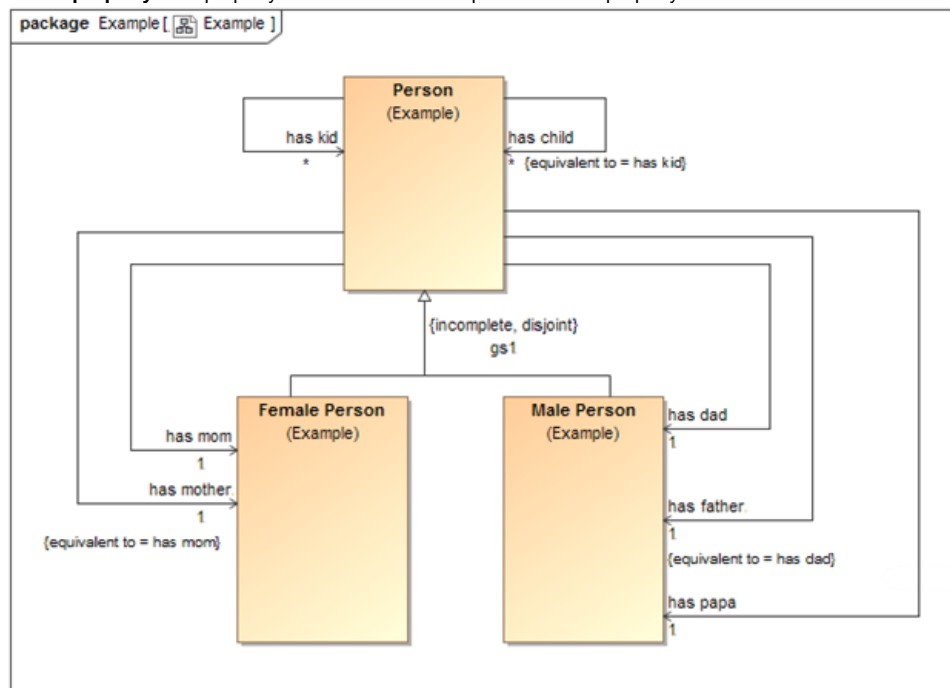

To create two or more equivalent properties

1. Drag a property, e.g., "has dad" to a target property, e.g., "has father" in the diagram pane. The shortcut menu will open.

The Create equivalent properties shortcut menu.

2. Select **Create equivalent property**. The property "has father" is now equivalent to the property "has dad".

Two equivalent properties "has father" and "has dad".

- You may add more properties to the existing equivalent properties by dragging the next property, e.g., “*has papa*” to the equivalent property “*has father*” in the diagram pane.

The Add equivalent property shortcut menu.

- Select **Add property to equivalent property**. The property “*has papa*” is now equivalent to the properties “*has father*” and “*has dad*”.

Equivalent properties in Concept Modeler.
