Released on: June 30, 2020

Cameo DataHub 19.0 SP4 is significantly improved with bug fixes specifically implemented into the following areas. Get it today on nomagic.com or contact your sales representative, and don't forget to give us your feedback on Twitter or Facebook. Also, please check the latest documentation and additional resources.

Bug fix

- Synchronization is no longer applied with non-selected stereotypes that the data are copied twice to properties inherited from the parent stereotype containing the same property name.
- DataHub database no longer detects inconsequent changes after updating server projects.
- When synchronizing and mapping new nodes with the excluded type for TeamCenter integration, synchronized nodes are now marked as excluded without aborting the synchronization process.
- Excluded DHLinks are no longer deleted after updating Teamwork Cloud/server projects.
