Introduction

The world of business process management and modeling is changing. The Business Analyst needs more data and better access to Enterprise Architecture information. The Business Analyst is also a key member of the development team especially in light of the fact that Service Oriented Architecture (SOA) is a primary business driver.

At No Magic we believe that the Business Analyst should be able to use all data any time, in many different standards, all in one tool.

Cameo Business Modeler Plugin is the answer to these changes. We have integrated the latest business modeling standard (BPMN 2.0) into MagicDraw supporting the latest SOA and Enterprise Architecture standards.

The Best BPMN for UML Users

Our implementation of the Business Process Modeling and Notation (BPMN) standard provides the best capability for understanding internal business procedures. The notation includes performance, collaboration, and business transactions in your business between organizations.

For service providers and consultants, Cameo Business Modeler Plugin is also the ideal communication tool. Not only do you get the benefits of a standard business notation, but also many others that you and your customer/stakeholder can trust and understand. With collaboration and reporting tools, you can integrate your customer right into your process.

Cameo Business Modeler Plugin for MagicDraw supports all the following:

- All BPMN 2.0 diagrams
- Organization Structure and Business Data diagrams
- Business model analysis tables and matrices
- Additional usability features specifically for BPM modeling
- User manual and BPMN samples

Features

Cameo Business Modeler Plugin for MagicDraw supports all of the following:

- All BPMN 2.0 diagrams: Business Process, Collaboration and Choreography
- Organization Structure and Business Data diagrams
- Ability to create business data and resource roles descriptions in convenient tabular form
- The BPMN resource usage matrix for convenient resource roles assignment to activities
- Business process model correctness and completeness validation
- Import from existing BPMN 1.1 MagicDraw models to BPMN 2.0
- Import BPMN process diagrams from XPD 2.0, 2.1 and 2.2
- Export business processes to XPD 2.2 and BPMN2 XML
- Complete documentation and business modeling samples

Additional Capabilities:

- HTML publishing direct to the web
- Word and spreadsheet reports
- Collaboration via Teamwork Server
- Customizable validation of models for standard and corporate rules
- Expandable capabilities through our open API via Java and scripting languages
- Business process model integration with software architecture (UML standard)
- Mix with SOA, Enterprise Architecture, and other standards
- Link BPM to Cameo Requirements+ to manage requirements right in the tool
