

Modelica export

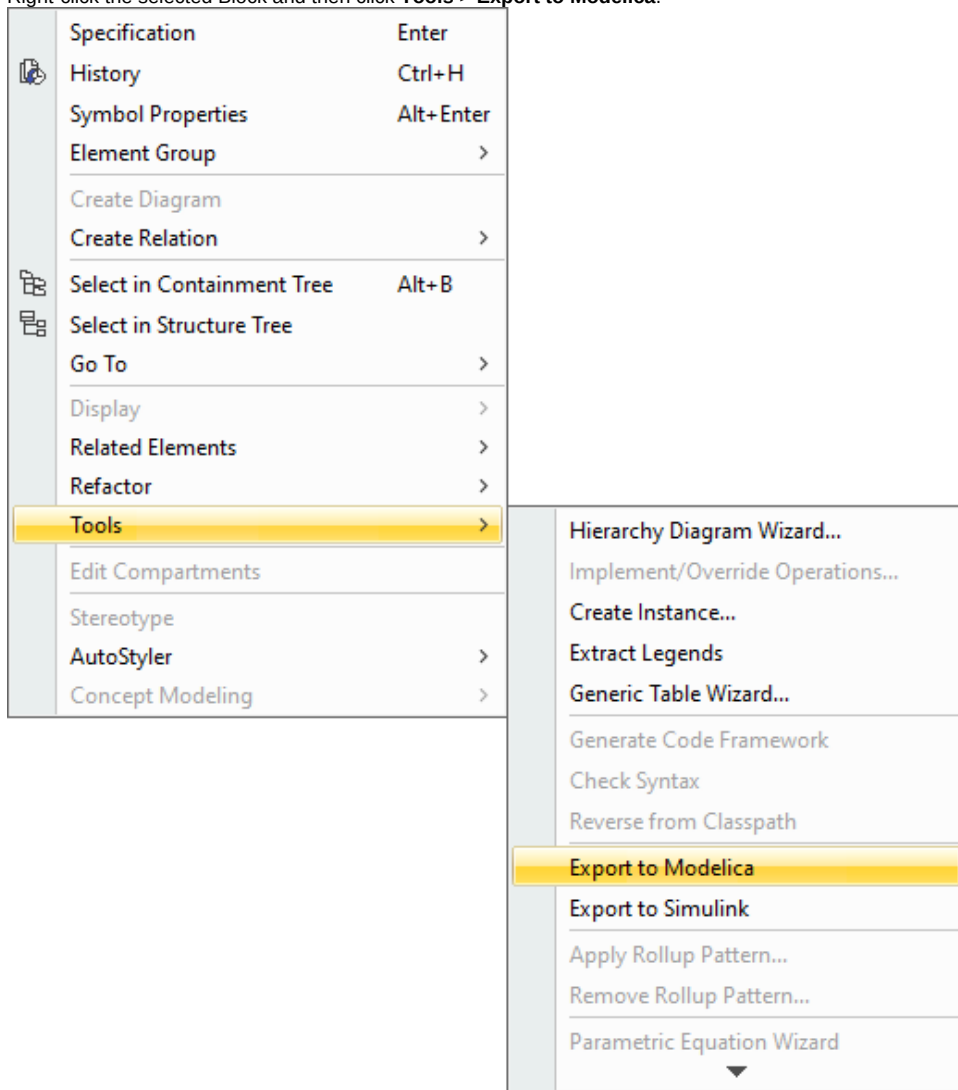

To export to the Modelica file

1. In the [Model Browser](#), select the Block to export and do one of the following:

- Click **File > Export To > Modelica**.

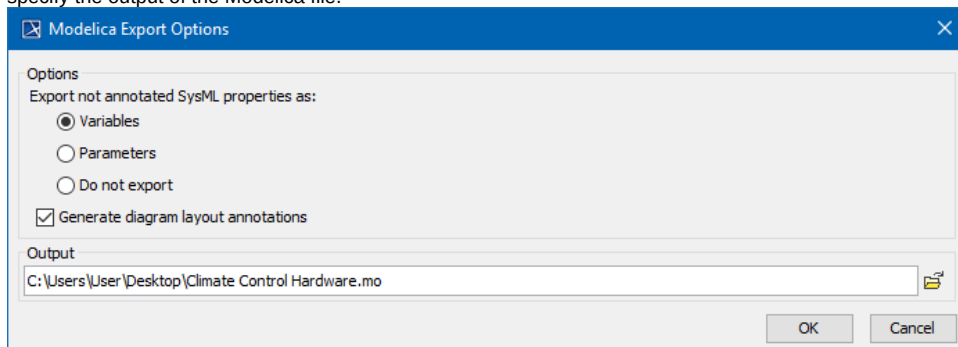

- Right-click the selected Block and then click **Tools > Export to Modelica**.

2. In the **Modelica Export Options** dialog:

- specify the export options (select whether the unannotated SysML properties should be exported as variables, parameters, or not exported at all)
- choose whether to generate diagram layout annotations
- specify the output of the Modelica file.

3. Click **OK**. The Modelica (.mo) file is generated.
