Creating a DOORS module view Data Source

If you want to synchronize new elements from MagicDraw to the module view Data Source, you must synchronize them from the original Data Source that represents that module.

To create a module view Data Source

1. Right-click a module in DataHub Explorer and select Create data source from View.

| 台音 Cameo DataHub Explorer | | | | | | |

| Cameo DataHub | | | | | | |
| | □ 1 □ 2 □ 2 □ 3 □ 4 | 1 1 Welcome 2 2 Editing an 3 3 Views 4 4 User type: 5 5 Requirem Module | | Create data source from View | | |
| | | | • | New Node | 43 | |
| | | | | Delete Node | | |
| | | | | Reload | | |
| | | | • | Select in Application | | |
| | | | | Go to the Other Related Link | | |

2. The Create data source from View dialog opens and lists all available views. From the View drop-down list, select one of the views.

3. The module view Data Source of the selected view will be created.
