

Development Tools

Development Tools provides various development related tools/utilities.

You can bundle your resources into one *.rdzip* file and then distribute that file on a local file system, network share, or web server. To build the resources file, you need to install the **Development Tools** plugin. The **Development Tools** plugin can be downloaded from nomagic.com individually and then installed using **Resource/Plugin Manager**, or it can be found in the resource distribution file (*.rdzip*).

Resource distribution can be useful for distributing a set of resources accompanied with custom resources or in a locked down environment where the resource bundle is hosted in a local network.

Also, you can create your own custom profile implementation.
