

Defining the Ready and Running behaviors using Alf

Next, add entry Behaviors to the *ready* and *running* States of the *StopWatch* State Machine.

To add an entry Behavior to the *ready* State

1. Click on the *ready* state and, in the Alf editor window, press **Create**.
2. Type the Alf code shown in the figure below.

3. When the code is correct, press **Save**. The Alf code should now appear in the entry Behavior for the *ready* State, as shown in the figure below.

To add an entry Behavior to the *running* State

1. Click on the *running* state and, in the Alf editor window, press **Create**.

2. Type the Alf code shown in the figure below.

3. When the code is correct, press **Save**. The Alf code should now appear in the entry Behavior for the *running* State, as shown in the figure below.

At this point the *StopWatch* has been completely modeled. You can now execute the *StopWatch* Class using Magic Model Analyst.
