Creating SysML projects

There are three ways to create the SysML projects:

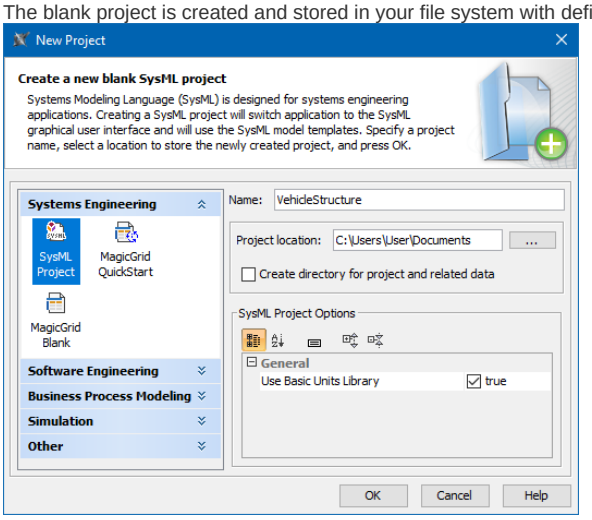

- Creating the blank SysML project
- Creating MagicGrid projects
- Creating SysML project from template

Creating the blank SysML project

To create a blank SysML project

---

1. Do one of the following:
    - Select **File** > **New Project**.
    - On the main toolbar, click the **New Project** button.
    - Press Ctr+Shiftl+N.
2. In the **New Project** dialog, under **Systems Engineering**, select **SysML Project**.
3. Specify name and location.
4. Click **OK** when you are done.
   The blank project is created and stored in your file system with defined name.

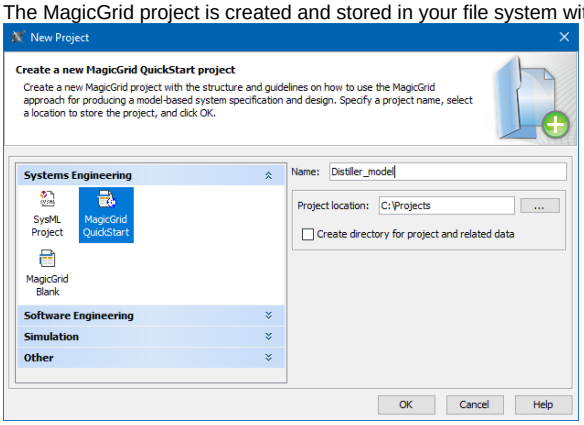

Creating MagicGrid projects

To create a MagicGrid project

---

1. Do one of the following:
    - Select **File**>**New Project**.
    - On the main toolbar, click the **New Project** button.
    - Press Ctr+Shiftl+N.
2. In the **New Project** dialog, under **Systems Engineering**, select either:
   - **MagicGridQuickStart** - to create a project with a structure and guidelines on how to use the MagicGrid approach.
   - **MagicGridBlank** - to create a blank project with a predefined package structure of the the MagicGrid approach.
3. Specify name and location.

4. Click **OK** when you are done.
   The MagicGrid project is created and stored in your file system with defined name.

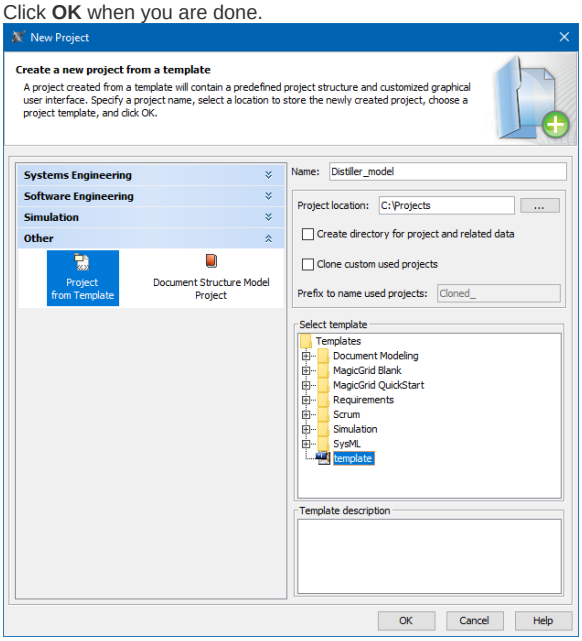

Creating SysML project from template

To create a SysML project from a template

---

1. Do one of the following:
   - Select **File**>**New Project**.
   - On the main toolbar, click the **New Project** button.
   - Press Ctr+Shiftl+N.
2. In the **New Project** dialog, under **Other**, select **Project from Template**.
3. Specify name and location.
4. Select the **SysML** template.
5. Click **OK** when you are done.
