Changed Property Types

Changes for Condition and Environment

In earlier versions, the Activity Performable Under Condition property (owned by Activity) had the Condition as its value. After the migration, the newly created Actual Condition with the Condition set as a type, replaces this property.

The same is valid for the Required Environment (owned by Location Holder) value. If the value was Environment, the Actual Environment is created with Environment set to this property. If the value was Condition, it is removed and added to ToDo property.

Changes for Doctrine

In earlier versions the Doctrine property (owned by Capability Configuration) had Constraint for its value. In UAF 1.1 Constraint is replaced by Standard Operational Activity. After the migration, Capability Configuration is set as constrainedElement to Constraint Except if Constraint is Operational Constraint or Service Policy.
