

Creating PV-3 matrix

PV-3 Project to Capability Mapping describes the mapping of programs and projects to capabilities to show how the specific projects and program elements help to achieve a capability.

The rows of this matrix are Actual Projects and the columns are Capabilities.

To create a PV-3 matrix

1. Specify **Row Scope** (Actual Projects).
2. Specify **Column Scope** (Capabilities).
3. Click .

Actual Project maps to Capability through several transitive relationships which are displayed in the Matrix.

By default, the traceability is shown according to the following criteria:

- **Mapping Using Milestone (Actual Resources and Resources).** The Actual Project owns Actual Project Milestones (Owned Milestones property) that are related to Actual Resources (milestone property) in which type is exhibiting (Exhibits relationship) Capabilities.
- **Mapping Using Milestone (Resources Performers).** The Actual Project owns Actual Project Milestones (Owned Milestones property) that are related to Resources (version releasedAtMilestone and versionWithdrawn properties) which are exhibiting (Exhibits relationship) Capabilities.
- **Mapping Using Milestone (Service Specification).** The Actual Project owns Actual Project Milestones (Owned Milestones property) that are related to Service Specifications (version releasedAtMilestone and versionWithdrawn properties) which are exhibiting (Exhibits relationship) Capabilities.
- **Mapping Using Milestone (Actual Resources).** The Actual Project owns Actual Project Milestones (Owned Milestones property) that are related to Actual Resources which are exhibiting (Exhibits relationship) Capabilities.

You may hide some mapping rules from a Matrix by changing the Dependency criteria in the **Specification** window.
