

Actual Resources Taxonomy

Description

The Actual Resources Taxonomy (Ar-Tx) domain illustrates the actual organizational structure and relationships among actual organizations, actual posts, and actual persons filling those actual post, that are the key players in the architecture.

This domain describes the hierarchy of control within actual organizations, between actual posts and actual persons filling those actual posts that affect the architecture and how it is used. It is the instance version of the personnel structure which defines the types of organizations and post, etc.

Implementation

Actual Resources Taxonomy (Ar-Tx) domain is represented by [Actual Resource Taxonomy Matrix](#).
