

Working with Resources to Capabilities Mapping matrix

Resources to Capabilities Mapping (Rs-Tr) addresses the direct and indirect linkage between Resources (Enterprise Phase, Operational Agent, Resource Performer, Service Specification, Actual Enterprise Phase, Actual Enduring Task) described in the Resources domain and Capabilities specified in the Strategy domain.

The Rows of this matrix are Resources and the Columns are Capabilities.

To build the Matrix

1. Specify **Rows** scope (Resources);
2. Specify **Columns** scope (Strategy);
3. Click the **Refresh** button.

Resources exhibit capabilities using the "exhibits" relationship.

To map a resource to a Capability, double-click the intersection between the desired elements. Double-clicking the intersection again will delete the relationship.
