

Projects Taxonomy

Description

The Projects Taxonomy (Pj-Tx) domain shows the taxonomy of types of projects and project milestones. It represents an organizational perspective on programs, projects, portfolios, or initiatives. The Projects Taxonomy (Pj-Tx) domain enables the user to model the organizational structures needed to manage programs, projects, portfolios, or initiatives. This model could be used to represent organizational relationships associated with transformation initiatives along with those who are responsible for managing programs, projects, and portfolios. The Projects Taxonomy (Pj-Tx) domain provides a means of analyzing the main dependencies between acquisition elements or transformation elements.

The intended usage of the The Projects Taxonomy (Pj-Tx) domain includes, but is not limited to:

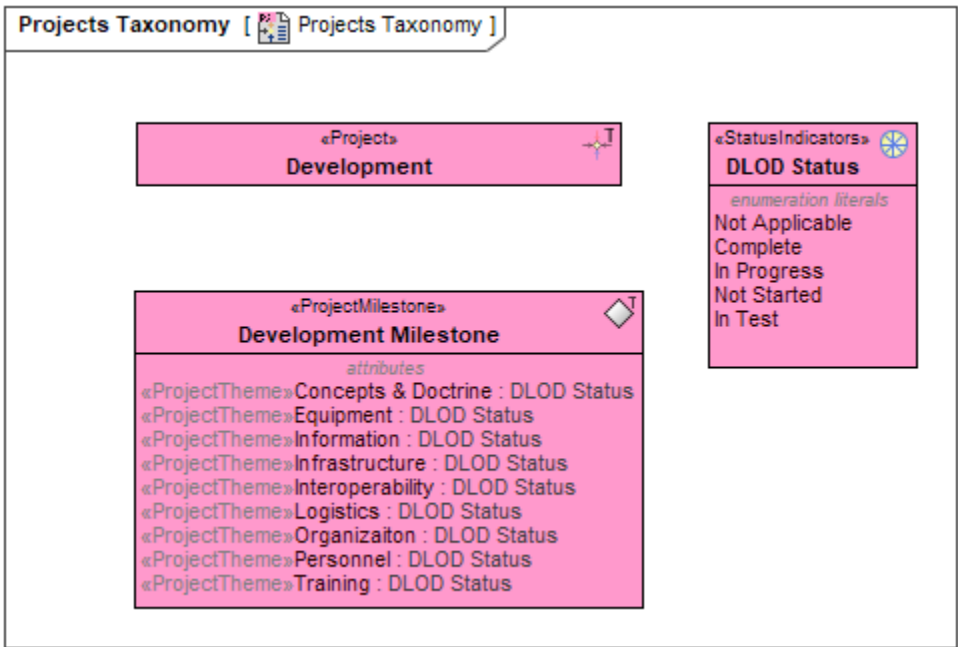

- Program management (specified acquisition program structure).
- Project organization.
- Cross-cutting initiatives to be tracked across portfolios.

Implementation

The Projects Taxonomy (Pj-Tx) domain is represented by:

- [Projects Taxonomy diagram](#).
- [Projects Taxonomy table](#). This table can be used to create and describe major domain elements faster.
