Using Organization Structure Diagram

Creating and Using Resources

You can create a Resource inside a package. The Resource is not displayed on a BPMN2 diagram as it is represented by a Pool, Data Object, and Choreography Task.

To create a Resource on a Organization Structure diagram

- On the Organization Structure Diagram pallet, click the Resource button.

To create a Resource in the Containment tree

- Right-click a package in the Containment tree. On the shortcut menu, click **Create Element** > **Resource**.

To change a type of Resource

- Right-click the Resource and on the shortcut menu select needed Resource type.

To review traceability information related to a Resource

---

1. Right-click a created Resource in the Containment tree and click **Specification** to open the Resource Specification window.
2. In the Resource Specification window, select **Traceability**.
