

# End Events

An End Event indicates where the path of a process ends. In terms of sequence flows, an End Event ends the flow of a process, and thus, does not have any outgoing sequence flow.

Types of End Events used in business process modeling are the following:

- [None End Event](#)
- [Message End Event](#)
- [Error End Event](#)
- [Escalation End Event](#)
- [Cancel End Event](#)
- [Compensation End Event](#)
- [Signal End Event](#)
- [Terminate End Event](#)
- [Multiple End Event](#)
