

# Magic Systems of Systems Architect Home Page

This is the home page of Magic Systems of Systems Architect documentation.

Magic Systems of Systems Architect is based on the award-winning MagicDraw modeling platform. The solution retains all the best diagramming, collaboration, persistence, and documentation capabilities while offering more customized capabilities tailored to **enterprise architecture** needs.

The documentation of Magic Systems of Systems Architect is a package that includes the documentation of these capabilities:

General Capabilities					Additional	
Introduces the main features of modeling tool: working with projects, UML 2 modeling and diagramming, collaboration capabilities, and many more core features.	UPDM 2 modeling		UAF modeling	SysML modeling	Requirements modeling	Concept modeling
	Provides descriptions of UPDM 2 diagrams and elements, plus introduces UPDM 2 specific features as well as gives guidelines for building enterprises.		Provides descriptions of UAF diagrams and elements, plus introduces UAF specific features as well as gives guidelines for building enterprises.	Provides descriptions of SysML diagrams and elements, plus introduces SysML specific features as well as gives guidelines for building systems.	Provides instructions about requirements modeling.	Provides instructions about concept modeling.
					Guides you through the import, export, and management of SysML requirements.	Installation and configuration
						Provides the information for simulation.
