Configuring Resource Usage Map URL

You can specify an URL to have quick access to the Resource Usage Map right from your modeling tool. It is especially helpful when you need to inspect th e project usages of a current Teamwork Cloud project.

To specify the Resource Usage Map URL

1. In the main menu, click **Collaborate** > **Open in Resource Usage Map**.
2. In the open dialog, specify the URL to access the Resource Usage Map.

URL Pattern

The URL you enter must follow this pattern:

http(s)://<domain_name>:<port>/webapp

3. Click **Open**.

The Resour rnal web browser. Once the configuration is complete, the specified URL will be automatically opened whe ce Usage Map**.

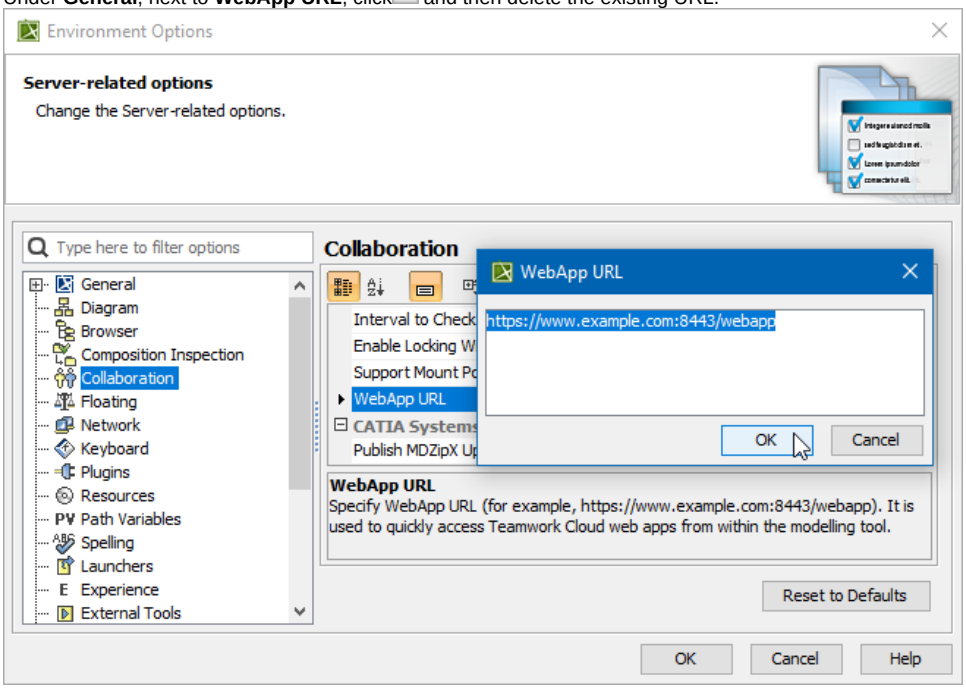

Example

https://www.example.com:8443/webapp

To remove the specified Resource Usage Map URL

1. In the main menu, click **Options** > **Environment**.
2. On the left side of the **Environment Options** dialog, select the **Collaboration** option group.

3. Under **General**, next to **WebApp URL**, click ... and then delete the existing URL.

4. Click **OK** when you are done.

The URL is removed, meaning that it will no longer be automatically opened when you click **Collaborate** > **Open in Resource Usage Map**. You can now set up another URL or leave the value undefined.
