

# Value Specification

You can create a standalone value specification in a model from the appropriate element's shortcut menu.

You can use any of the following ways to create a value specification:

- Via the element's shortcut menu.
- Via the element's Specification window.
- By defining a default value to an element.

You can also change an assigned value specification after it has been created.

To create a value specification from the element's shortcut menu

1. In the Containment tree, select an appropriate element.
2. From the selected element's shortcut menu, select **Create Element > Value Specification** and choose a suitable value specification.

To assign a value specification in the element's [Specification window](#)

1. In the Specification window of the selected element, choose an appropriate property value cell and click the **Show Shortcut Menu** button (the black arrow).
2. In the shortcut menu, click **Value Specification** and select a value specification.

To create a value specification automatically

1. Assign a default value to a property for which you want to create a value specification.
2. The value specification of the corresponding type will be assigned automatically according to the assigned default value in your model.

To change an assigned value specification

1. In the Specification window of the selected element, choose an appropriate property value cell and click the **Show Shortcut Menu** button (the black arrow).
2. From the shortcut menu, select **Value Specification > Delete** <value specification>.
3. Assign a new value specification.
