

Configuring the command bar and shortcut keys

You can add custom commands to the command bar of a dependency matrix as well as assign custom shortcut keys for the commands.

To add a new command to the command bar, add an instance of the [com.nomagic.actions.AMConfigurator](#) interface to the [com.nomagic.magicdraw.actions.ActionsConfiguratorsManager](#) class, as is shown in the following example:

```
ActionsConfiguratorsManager.getInstance().  
addDiagramCommandBarConfigurator(  
    DependencyMatrixConfigurator.  
DEFAULT_DEPENDENCY_MATRIX_DIAGRAM_TYPE, new AMConfigurator()  
{  
    @Override  
    public void configure(ActionsManager mngr)  
    {  
        mngr.addCategory(new ActionsCategory("ID", "My Category"));  
    }  
  
    @Override  
    public int getPriority()  
    {  
        return AMConfigurator.HIGH_PRIORITY;  
    }  
});
```

When customizing the default dependency matrix type, provide the name defined in the [com.nomagic.magicdraw.dependencymatrix.configuration.DependencyMatrixConfigurator](#). [DEFAULT_DEPENDENCY_MATRIX_DIAGRAM_TYPE](#) constant. And when customizing a custom dependency matrix type, provide the name defined in the instance of the [DependencyMatrixConfigurator](#) class as well as in the **Customize Dependency Matrix Wizard** dialog.

The same code example can be used for the shortcut key configuration:

```
ActionsConfiguratorsManager.getInstance().  
addDiagramShortcutsConfigurator(...)
```
