

# Unlocking project elements

You can [lock elements of a project](#) in a trunk or a branch to prevent them from being modified by other users. Only users who have [permission](#) to remove a user lock can unlock the elements of that particular project. When multiple users work on a single project, they may also lock different elements in the project. TWCloud Admin allows you to unlock elements in a project that are locked by other users in a branch. It also enables you to unlock all locked elements in a project.

You can release locked elements in either the Resources application or in the Users application. The Resources application allows you to unlock all elements in a project.

To release locked elements

---

1. Navigate to the Resources application. Do one of the following:

- Click  next to the resource, and choose **Release locked elements**.
- Click the resource and in the **Resource** pane, click  and choose **Release locked elements**.

You can use the locked element filter to search for elements according to username or branch name.

2. **Release locked elements** opens. Select elements.

If a project is locked in different branches, releasing the lock(s) on a branch will not release other locks in the other branches.

3. Click the **Unlock** button.
