

# Resources Parameters

## Description

The Resources Parameters (Rs-Pm) domain depicts the measurements of resources.

The intended usage of the The Resources Parameters (Rs-Pm) domain includes:

- Definition of performance characteristics and measurements.
- Identification of non-functional requirements.

## Implementation

The Resources Parameters (Rs-Pm) domain is represented by:

- Environment diagram.
- Typical Measurements table.
- Hierarchical Typical Measurements table
- Actual Measurements table.
- Resources Parametric diagram
- Actual Measurements (.xlsx).

## Samples

#	Property Set
1	Status Alerting
2	Signal Processor
3	Transmitter
4	Receiver

An example of the typical measurements table

#	Property Set	Performance Requirement	Measure	Metric
1	Receiver	Signal To Noise Ratio	20	dB
2	Receiver	Gain	60	dB
3	Signal Processor	Comms Channel Bandwidth Support	2	GB
4	Status Alerting	Min. Alert Response Time	30	seconds
5	Status Alerting	Min. Status Change Alert Accuracy	500	meters
6	Transmitter	Transmission Rate	2	GB

An example of the actual measurements table
