

What is the best way to reinstall my modeling tool on new computer or the same one after formatting.

Reinstall product on new computer:

1. [Deactivate the current license.](#)
2. Download and install the fresh installation on new machine.
3. Start it after the installation is finished.
4. The Import Configuration dialog will appear upon opening installation for the first time. In the dialog, type the path to the installation folder of an older installation to import program configurations from it.
5. Uninstall the product from old machine.
6. You will be requested to activate the license and receive the commercial license dedicated for the particular machine.
