

Working with Schema Map Manager

When copying data, schema maps are used for mapping source types to target types and also mapping source attributes to target attributes. **Schema Map Manager** allows you to view schema maps available in the system, edit a schema map, import a new schema map, or copy the current schema map.

To open **Schema Map Manager**

- From the MagicDraw® main menu, click **Tools > DataHub > Schema Map Manager**. The **Schema Map Manager** dialog opens.
