Deploying the DOORS driver for IBM Rational DOORS

Before adding a DOORS Data Source, you must deploy the DOORS driver.
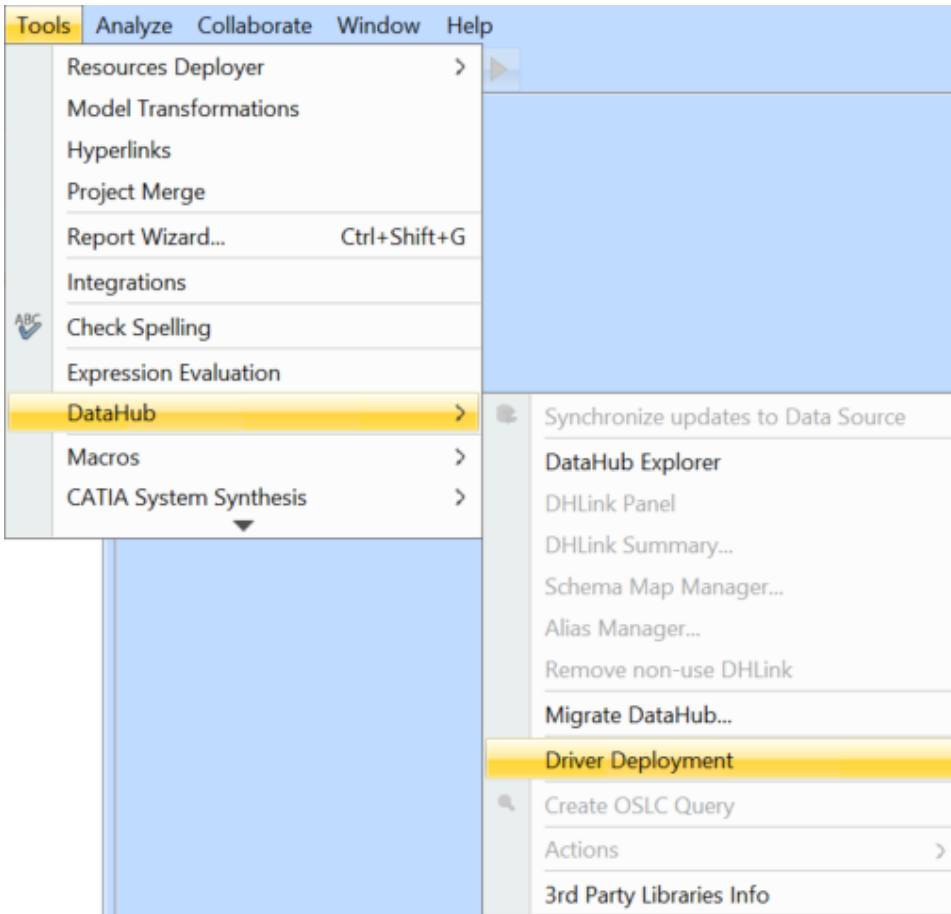

> ⚠️ **Note**
>
> - Driver deployment copies the DXL script file into the DOORS **addin** folder and updates the registry for DOORS to recognize the **addin** path.
>
>   Therefore, you must run MagicDraw or Cameo products as an administrator to allow these operations during driver deployment.
>
> - You must close the DOORS application before driver deployment since folders are write-protected when the application is active.

To deploy the DOORS driver

1. From the MagicDraw® main menu, click **Tools** > **DataHub** > **Driver Deployment**. The **Driver Deployment** dialog opens.

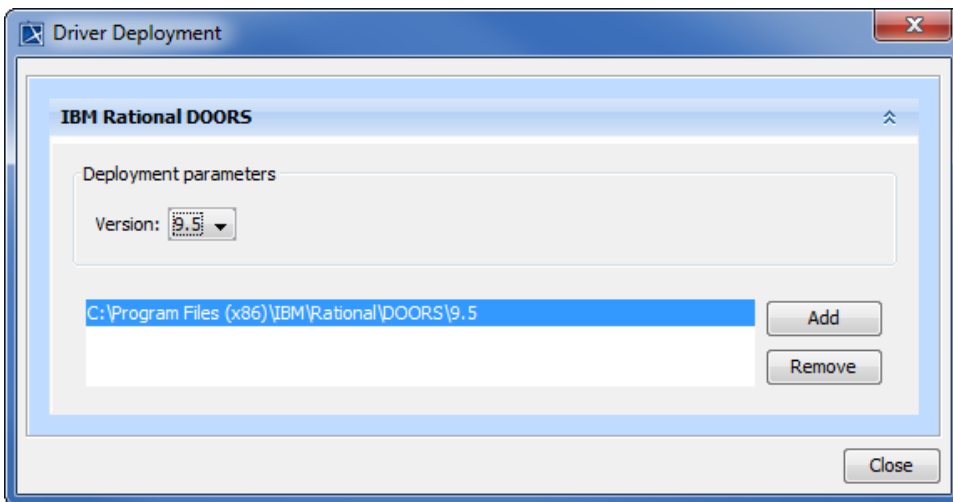

2. From the **Version** drop-down list, choose a version of IBM® Rational® DOORS® that you would like to add.

> 🛈 **Warning**
>
> It is important to choose the DOORS version before you click Add .

3. Click ![Add button]. An **Open** dialog appears which prompts you to choose your DOORS installation directory. Locate it and then click **Open**. The DOORS driver is now deployed, and you can now add a DOORS Data Source.
