

# Association Class

An Association Class is a model element with both [Association](#) and [Class](#) properties. You can look at an Association Class as an Association that also has Class properties, or as a Class that also has Association properties. Additionally, it connects a set of classifiers and defines a set of features belonging only to the relationship and not to any of the classifiers.

Example of an association class.

You can [edit element property values](#) in the [Specification window](#).

To draw an association class

1. Draw two Classes.
2. Click the **Association Class** button on the diagram palette.

**Association Class button**  
If you do not see the **Association Class** button in the diagram palette, click the black arrow next to the **Association** button to see the list of associations. Select **Association Class** from the list.

3. On the diagram pane, click the first Class shape (path source).
