

Creating a template for an HTML, a text, an XML, or a DocBook document

To create a template for an *HTML*, a *text*, an *XML*, or a *DocBook* document

1. Open a text editor.
2. Add the code to the text file.
3. Save the template file (with a correct filename extension).
4. Add the template to Report Wizard.

- When you generate a report from a particular template, Report Wizard will automatically create an *HTML*, *text*, an *XML*, or a *DocBook* document depending on a given template filename extension.
- The **#forrow**, **#forcol**, and **#forpage** directives do not support *HTML*, *text*, *XML*, and *DocBook* format files.
