

Paths

Paths are presentation elements created for such model elements as Relationships. Path has the following attributes:

- **Supplier** – the presentation element of a Relationship supplier. Use method [com.nomagic.magicdraw.uml.symbols.paths.PathElement.getSupplier\(\)](#) to access this element.
- **Client** – the presentation element of a Relationship client. Use method [PathElement.getClient\(\)](#) to access this element.
- **Supplier point** – the connection point of a path and supplier element. Use method [PathElement.getSupplierPoint\(\)](#) to access this point.
- **Client point** – the connection point of a path and client element. Use method [PathElement.getClientPoint\(\)](#) to access this point.
- **Break points** – a list of path breaking points between supplier and client points. This list can be empty if path is straight. Use method [PathElement.getBreakPoints\(\)](#) to access this list.
