SysML Compliance mode changes

Using the UAF Profile, the SysML Compliance mode is no longer used, because the elements are inherited from the SysML. If the UPDM2 project was using SysML Compliance mode, after the migration, the Tags from the earlier used SysML elements are copied to the same location of the UAF elements.

The following elements will have two stereotypes (UAF stereotype and SysML PartProperty stereotype):

- Capability Property
- Concept Role
- Known Resource
- Operational Role
- Problem Domain
- Resource Role
- Structural Part
- Temporal Part
