Reviewing content history

You can view changes in the model in a particular scope at the element level; that is, a selected package or a classifier element (a composed element). Th e ability to see the history of a selected Block, Requirement, or another composed element is a big benefit for system engineers.

History of element changes in the scope of a Cinema package.

In the history review panel, you can see various details about the changes between selected versions, such as the list of elements that was changed, when changes were made, and who made changes. Different colors describe if a particular model element is added, deleted or modified. You can also export the content history of changes to a report in a *docx* format.

Default, only 3 project versions are loaded when clicking the Show more results button; however, you can change this default value by adding an

argument to the properties file of the modeling tool (see instructions below):

1. Go to <modeling tool installation directory>/bin and open the properties file of your modeling tool.

To view the changes of a particular project scope **2.** Do one of the following:

- 1. Select a compose the encodent entities to the residence of the second and the
- 2. From the shortcut menu select Content History. The history review panel opens, where you can analyze changes between selected server project versions.
- 3. To see differences between the selected version and the earlier one.
 Double click the project version to see differences between the selected version and the earlier one.
 - *timeout* = 2000.
 Select the list of versions and click the
 [™] button.
 - 3. Save and close the file.

Stopping collecting changes
 too much time, you can click the Stop button to complete reviewing changes through versions of the selected
 composed element.
