

Editing an LDAP server configuration properties

You can change the configuration properties of an LDAP server connected to the Teamwork Cloud (TWCloud) system. The system will update the configuration properties with the new values automatically.

To edit the configuration properties of an LDAP server do one of the following

- On the **LDAP management** page, select card with LDAP server which you want to edit and click **Edit** button.
 - Change wanted configuration parameters.
 - Click **Save**, to save changes.
