Modeling tool version 19.0 SP3 does not start after upgrading to Mac OS X Big Sur

The modeling tool* version 19.0 SP3 does not start after upgrading to Mac OS X Big Sur. How can I fix this issue?

This happens because the application is moved into quarantine.

To remove the application from quarantine

1. Open a terminal.
2. Write the command: *xattr -r -d com.apple.quarantine /<modeling tool installation folder>* (*e.g. "xattr -r -d com.apple.quarantine /Applications /MagicDraw"*)
3. Press Enter to execute the command.
4. Close the terminal and start the modeling tool* using the .app file.
