

Creating merged row vertically

On this page

- [\\$tableprop.mergeRows\(Int number\)](#)
- [\\$tableprop.mergeRows\(String stringNumber\)](#)

There are two methods that you can use to merge rows.

\$tableprop.mergeRows(Int number)

When you put the statement into a row, it will be set as a merged row in a specified number.

For example:

Template code:

<code>#forrow(\$c in \$sorter.sort(\$Class))\$c.name\$tableprop.mergeRows(\$c.ownedElement.size())#set(\$count=0) #foreach(\$attr in \$c.ownedElement)#set(\$count = \$count + 1) #end#end#endrow</code>	<code>\$attr.name#end#end#endrow</code>
--	---

Output:

ClassA	Att1
	Att2
	Att3
ClassB	Att1

\$tableprop.mergeRows(String stringNumber)

When you put the statement into a row, it will be set as a merged row in a specified String of number.

For example:

Template code:

<code>#set(\$a = \$array.createArray()) #set(\$void = \$a.add("A")) #set(\$void = \$a.add("B")) #set(\$void = \$a.add("C")) #forrow(\$c in \$a)Name\$tableprop.mergeRows("3") \$c#endrow</code>	
---	--

Output:

Name	A
	B
	C

Note
