

# Hello

The Hello sample is a simple model that contains two activities:

- *Hello( name : String )* – Writes "Hello" followed by the input name.
- *Hello World()* – Calls *Hello* with the input "World".

Both these activities were compiled from Alf. To see the original Alf code, open the [Alf editor](#) window (select **Window > Alf**) and select either activity. The Alf code will appear in the window.

When [executed \(using MSI\)](#), the *Hello World* should write "Hello World!" in the console pane of the simulation window.
