

Address Book

The Address Book sample includes a simple Class model in which the behaviors of Class Operations have been written in Alf. The model includes a Class diagram showing an *Address Book* Class that contains zero or more instances of an *Entry* Class.

To see the Alf code for an Operation of a Class, open the [Alf editor](#) window (select **Windows > Alf**) and select the Operation in the *Address Book* Class diagram. The Alf code for the Operation will then appear in the window.

[Executing the *TestAddressBook* Activity \(using MSI\)](#) exercises the functionality of the Address Book model. This activity should be run with the **Animation speed** slider set to its maximum (rightwards) position.
