

# Using Concept Modeling Capabilities with non-CCM projects

MagicDraw allows you to enable all the functionalities of Cameo Concept Modeler (CCM) plugin when you are working in a non-CCM project by adding the **Concept Modeling Profile** to your non-CCM project using the **Project Usages** dialog.

When working with a non-CCM project, e.g. a *SysML* project, you cannot select the **Concept Modeling** option.

The **Concept Modeling** option is grayed out.

To add the **Concept Modeling** profile using **Project Usages**

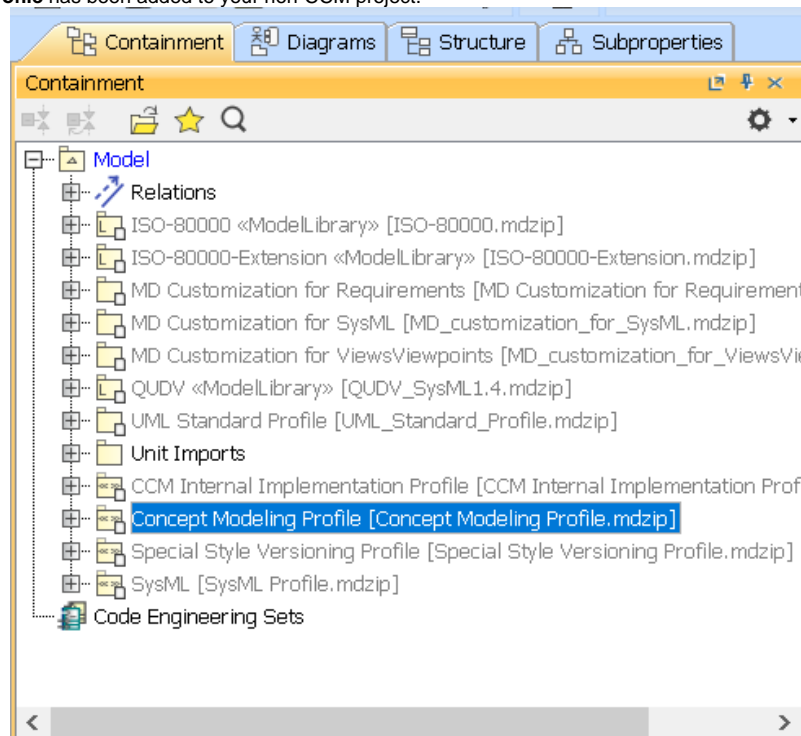

1. If you have already installed the CCM plugin, click **File > Use Project > Use Local Project**.

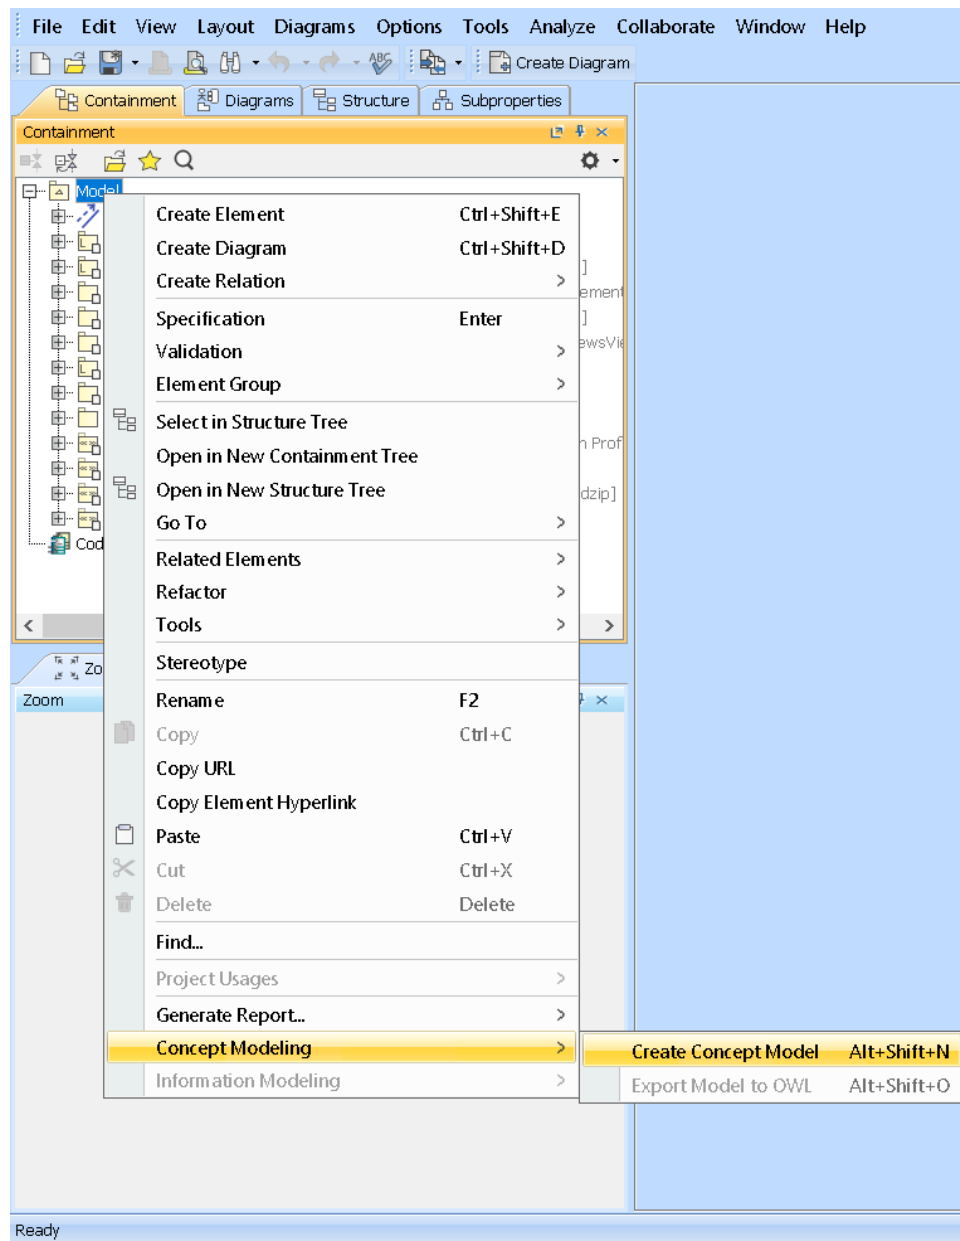

2. Select the options as shown below.

3. Click **Next**.
4. Select the **Read Only** option. Click **Finish**.
5. The **Concept Modeling Profile** has been added to your non-CCM project.

6. You can now choose the **Concept Modeling** option and create concept models.

You can now choose the **Concept Modeling** option, create a Concept Model, and benefit from all the CCM functionalities.
