## Exporting models and concept models at any level in package hierarchy

Cameo Concept Modeler can export «Model» and «Concept Model» stereotyped packages at any level under a package hierarchy by right-clicking any package in the hierarchy. The selected package(s) and their sub-packages that are «Model» or «Concept Model» stereotyped will be exported.

To export the selected package(s) and their sub-packages that are «Model» or «Concept Model» stereotyped

1. Select one or more packages (by holding CTRL when selecting other packages) to export. Right-click one of the selected packages and select Ex port Model to OWL.

2. In the Browse dialog, specify the export location.

3. Click **Open**. The **fileExportPath** tag value will be updated, and the selected package(s) and their sub-packages that are «Model» or «Concept Model» stereotyped will be exported.

B server projects, you must lock the package(s) first to update tag value.

Anailure in Bulk Exporting export to OWL now does not cancel exporting all the remaining packages.

Canceling Bulk Exporting Cancel for bulk export to OWL operation also cancels the export of all the Packages.
