

Pr Configuration Management

Description

The Pr Configuration Management view depicts the whole lifecycle view of a Resource, describing how its configuration changes over time. The Pr view provides an overview of how a capability configuration structure changes over time. It shows the structure of different versions of Resources (usually Capability Configurations or Service Implementations) mapped against a timeline.

The Pr view may be used for:

- Development of incremental acquisition strategy.
- Planning technology insertion.

Implementation

The Pr view can be represented using:

- Pr Configuration Management diagram which is realized as a time based diagram.

 Increase the diagram readability, use legends. To learn how to use legends, see [Legends](#) chapter.

- Pr MS Word document report.
