

# Setting up Guest user

After installing Web Application Platform, you need to create and setup the Guest user.

## Important

- Before setting up the Guest user, [create this user](#) in the [Users application](#) of [Teamwork Cloud Admin](#).
- Make sure to [assign appropriate roles](#) to the Guest user:
  - You can use default user roles with default permissions or [create custom roles](#) and [add appropriate permissions](#) to them.
  - You can use the [global scope](#) for Guest user roles or set a [custom scope](#) which means that user role permissions are only applied to specific resources.

To set up the Guest user

1. Go to the `<tomcat_home>/shared/conf` directory and open the `webappplatform.properties` file. (If you installed Cameo Collaborator for TWC manually, the file may be placed in a custom directory.)
2. Copy and paste the following data to the file:

```
# Specify the user name and password of the Guest user.
wap.guest.username=<guest_username>
wap.guest.password=<guest_password>
```

3. Replace the placeholders in the added properties (between angle brackets (<>)) with actual user names and passwords.
4. Save and close the file.
5. Restart Web Application Platform.

## Important

The Guest user takes one connection from the Cameo Collaborator license.
