

Accessing TWCloud Admin

You need a web browser to access the user interface of Teamwork Cloud Admin (TWCloud Admin). If you do not change the configuration settings, you can access the TWCloud Admin from its default location <https://<machine ip>:8443/webapp>. For example, if the machine IP on which you installed TWCloud Admin is 10.1.1.123, you can access TWCloud Admin from <https://10.1.1.123:8443/webapp> (the default port is **8443**).

If you change the default configuration settings with new values, you have to type those values into your web browser when attempting to connect to the server. The default administrator's username and password are both **Administrator**.
