

Working with Strategic Connectivity matrix

The Strategic Connectivity Matrix (St-Cn) shows the direct and indirect (using the [implied relations](#)) dependencies between the Capabilities.

The Rows and the Columns of this matrix are Capabilities.

To build the matrix

1. Specify **Rows scope** (Capabilities).
2. Specify **Columns scope** (Capabilities).
3. Click  button.

Capabilities map to Capabilities using Dependency relationship.

To map Capability to Capability

- Double-click the intersection between the desired elements.
- Right-click the intersection between the desired elements and select Implements.
