

Creating Process Flow Diagrams From Compositions or Aggregations Defined in Process Diagrams

When you have a process diagram with the defined aggregation/composition of activities/functions, you can create a process flow diagram for the selected activity/function:

- From the Smart manipulator toolbar.
- From the shortcut menu in the Containment tree.

To create a process flow diagram

1. Do one of the following:
 - In a process diagram pane, click the activity for which you want to create a process flow diagram. In the Smart manipulator toolbar, click the process flow diagram button.

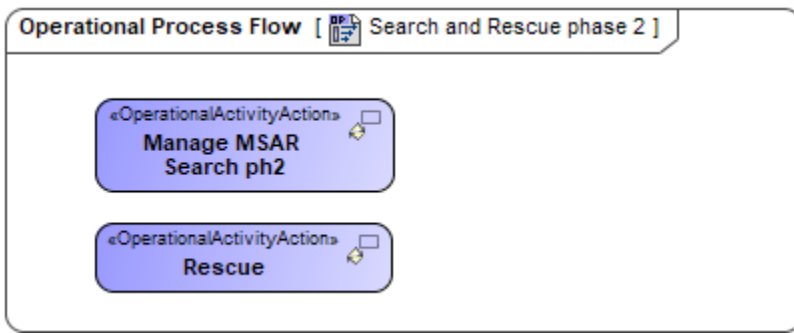

- In the Containment tree, right-click the activity and in the shortcut menu, click **Create Diagram** and the choose **<view> Process Flow**.
2. The **Select Behavior** dialog opens. In the open dialog, select which behaviors you want to be created in the process flow diagram.

-
3. Click **OK**.

The new process flow diagram is created.

 Note, that only the first level behaviors will be suggested in the **Select Behavior** dialog.
