

Package diagram

A Package diagram falls under the structural diagramming family. The Package diagram shows [packages](#) and [dependencies](#) between the Packages.

The [classes](#) can be grouped into packages. The packages can be nested within other packages. A Package, as an entity, may have all the relationships that can be drawn for a class. Those relationships are derived from the classes or packages that are nested within two particular packages (i.e., the relationship between packages reflects a set of relationships between classes placed in those packages).
