

Developer Guide

Introduction

Java APIs

- Execution
 - Starting execution
 - Stopping execution
 - Creating and registering a new SimulationExecutionListener
- Engine
 - Creating a new execution engine
 - Creating an execution engine descriptor
 - Creating an execution engine listener
 - Registering an execution engine to the Simulation Manager
 - Activating and deactivating an element
 - Triggering an Event
 - Printing messages in Simulation Console
- fUML Helper
- Parametric Helper as executing parametric simulation from an Activity
